Running JPF from within Eclipse using eclipse-jpf

eclipse-jpf can be easily configured to run JPF from within Eclipse

1. Install eclipse-jpf (see <u>Installing Eclipse JPF plugin</u>)
2. Make sure that the correct site.properties file is being used for JPF (The default is usually correct)
   To see which site.properties file is being used:
     1. From the Eclipse top menu go to 'Window->Preferences'
     2. Select 'JPF Preferences'
     3. Make sure that 'Path to site.properties' is defined properly.
3. From either the 'Package Explorer' view (On the left of the main Eclipse screen by default) right-click on the *.jpf with the JPF configuration wanted and select "Verify..."
4. Make sure that the Console view (Usually at the bottom of the main Eclipse screen) is opened to view the results from JPF
